

## Minnesota Center for Prion Research and Outreach

Making innovative connections across the spectrum of protein misfolding diseases

The Minnesota Center for Prion Research and Outreach (MNPRO) will be at the Outdoor News Deer & Turkey Classic to interact with Minnesota's hunting community about chronic wasting disease (CWD). Come learn about the biology of CWD, its potential impact on Minnesota's deer heritage and our environment, and ways that you can help stop the spread of this disease. Our booth features interactive educational displays, fact sheets, videos and experts who will be on-site to answer your questions about the science of CWD. See you there!

MNPRO is a multi-disciplinary center at the University of Minnesota focusing on the biology and epidemiology of human and animal prion diseases and related protein-misfolding disorders, including chronic wasting disease.
